DETAILED ACTION

Election/Restrictions

1. Claims 1-49 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 6-20-05.

Claim Objections

2. Claims 54-56 are objected to because of the following informalities: a period is present in other than at the end of the claim. Appropriate correction is required.

The recitations of claims 54-56 are considered only until the first period.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 57 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The recitation of "the light beams" lacks antecedent basis because there is only recited first and second beams.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 50, 53-58 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bramwell et al in view of Welte.

Bramwell et al discloses a method of positioning a spray gun at a desired distance from a target surface. A pair of spots are illuminated by first and second laser light beams angled to approach one another and offset sufficiently such that the beams do not touch one another regardless of the distance to the target surface (col 2, lines 50-68; col 3, lines 1-27). The two spots form an alignment pattern, and there is caused delivery of coating material to the target surface by keeping the spots in a predetermined alignment pattern.

There is not disclosed that the light beams are visible light.

Welte discloses positioning light beams as visible light (col 3, lines 55-67).

It would have been obvious to one with ordinary skill in the art to include visible light beams because Welte discloses errors is positioning (col 1, lines 17-30) and the primary reference is also concerned with positioning error.
